

# Medical Data Privacy and Ethics in the Age of Artificial Intelligence

## Lecture 12: Privacy Risk Assessment and Facial Image Privacy Risks

Zhiyu Wan, PhD (wanzhy@shanghaitech.edu.cn)

Assistant Professor of Biomedical Engineering

ShanghaiTech University

April 16, 2025

# Learning Objectives of This Lecture

- Understand the definition of Marketer risk
- Know where to find data (availability)
  - How to be a data detective
- Know the concept of facial image privacy

# Risk Models

- Risk means something different to everyone
- Can be modeled in various ways\*
  - Prosecutor  $\leftarrow 1/\min_i(y_i)$
  - Journalist  $\leftarrow 1/\min_i(Y_i)$
  - Marketer  $\leftarrow n^{-1} \sum_i \frac{y_i}{Y_i}$

$y_i$  = size of group in sample

$Y_i$  = size of group in population

$n$  = sample size

\*F. Dankar and K. El Emam. A method for evaluating marketer re-identification risk. EDBT/ICDT Workshops 2010.

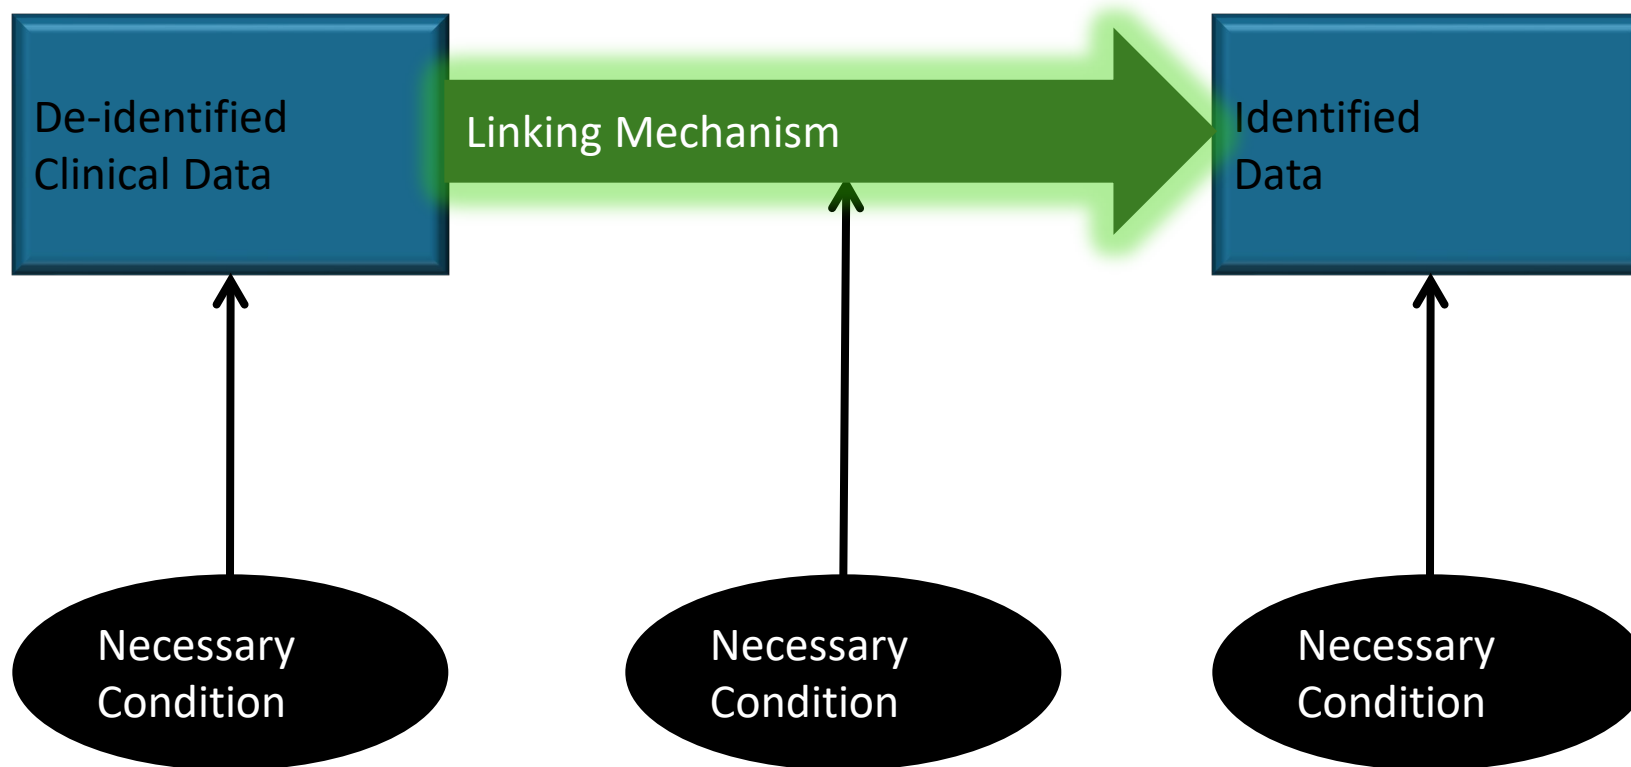

# Tuning the Marketer Model

- State of Kentucky risk  $\{DOB, Gender, County, Race\}$

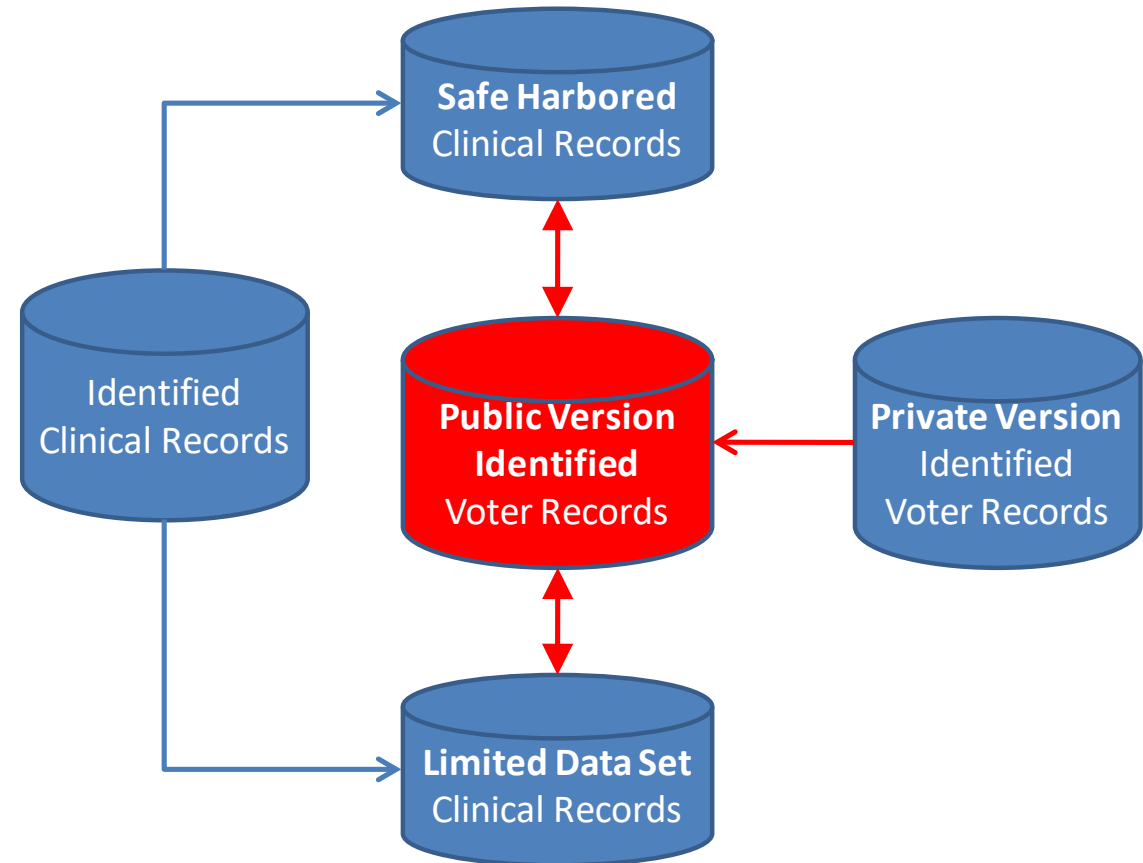

K. Benitez and B. Malin. Evaluating re-identification risks with respect to the HIPAA Privacy Rule. JAMIA. 2010; 17: 169-177.

# Central Dogma of Re-identification

# Going to the Source

- They polled all U.S. states for what voter information is collected & shared
- What fields are shared?
- Who has access?
- Who can use it?
- What's the cost?

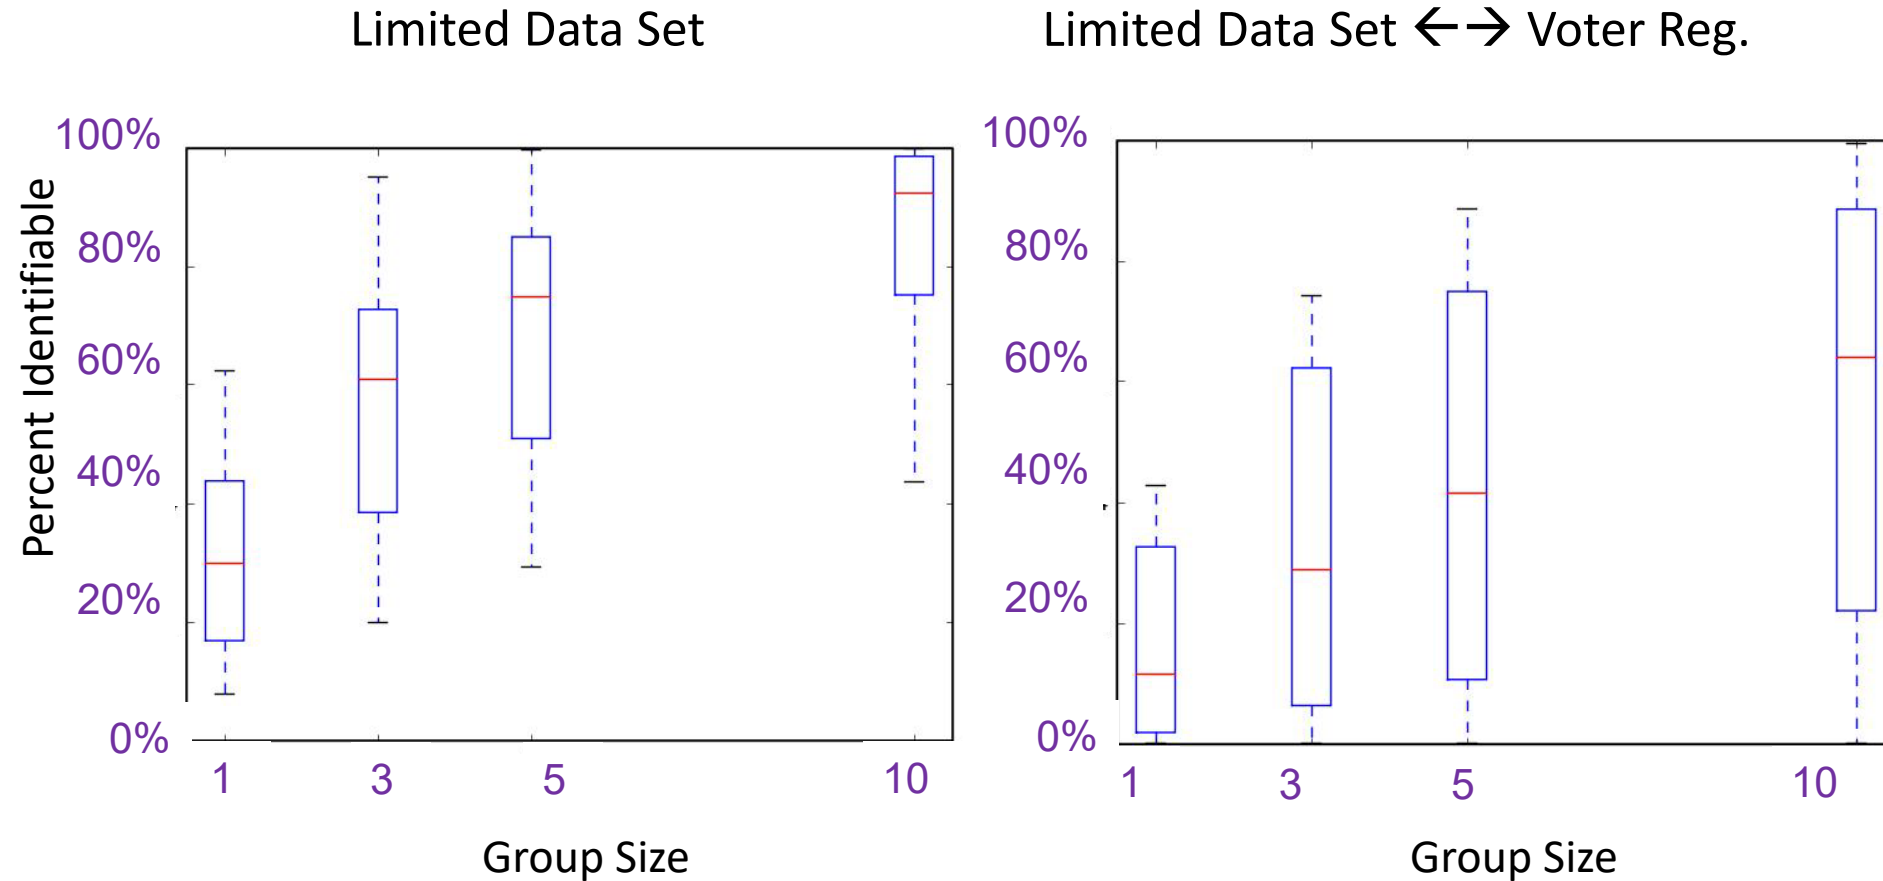

# The Availability of Demographics Varies...

	IL	MN	TN	WA	WI
WHO	Registered Political Committees (ANYONE – In Person)	MN Voters	Anyone	Anyone	Anyone
Format	Disk	Disk	Disk	Disk	Disk
Cost	\$500	\$46; “use ONLY for elections, political activities, or law enforcement”	\$2500	\$30	\$12,500
Name	●	●	●	●	●
Address	●	●	●	●	●
Date of Birth	●	○	●	●	
Sex	●		●	●	
Race			●		
Phone Number	●	●			

K. Benitez and B. Malin. Evaluating re-identification risks with respect to the HIPAA Privacy Rule. JAMIA. 2010; 17: 169-177.

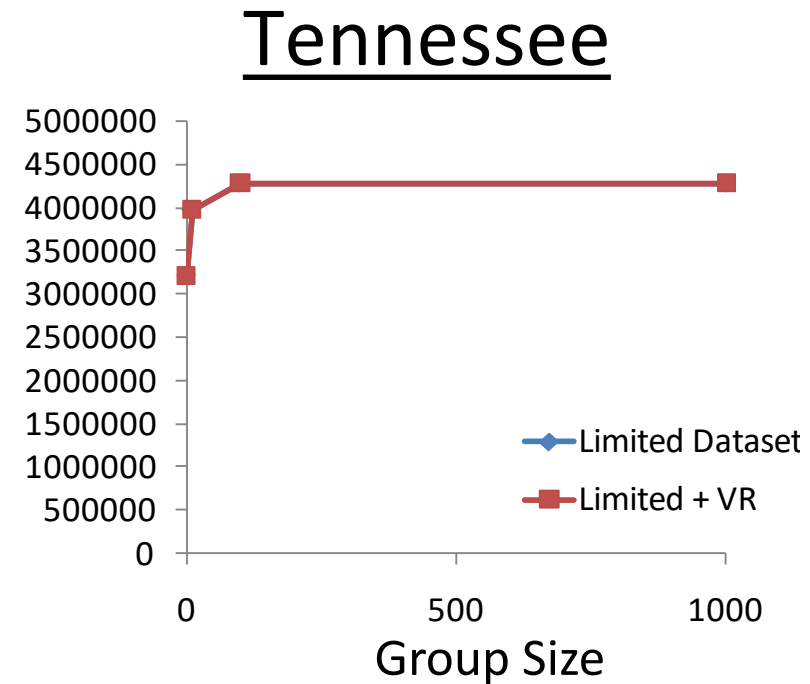

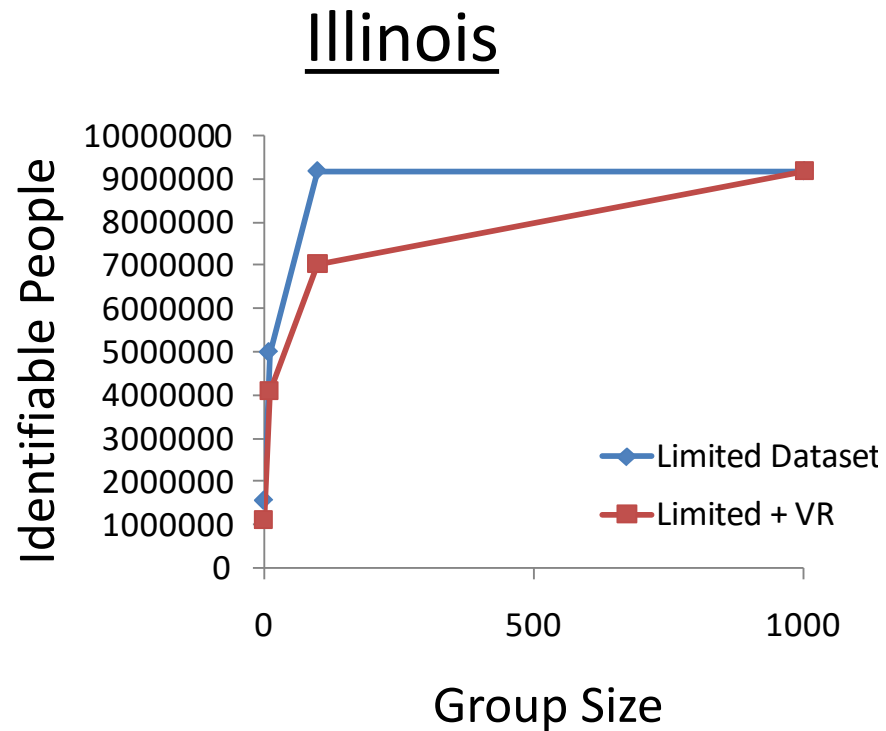

# Identifiability Changes!

K. Benitez and B. Malin. Evaluating re-identification risks with respect to the HIPAA Privacy Rule. JAMIA. 2010; 17: 169-177.

# Worst Case vs. Reality

# And What About Cost?

U.S. State	Limited Dataset		Safe Harbor	
	At Risk	Cost per Re-id	At Risk	Cost per Re-id
<i>Virginia</i>	3159764	\$0	221	\$0
<i>South Carolina</i>	2231973	\$0	1386	\$0
<i>Wisconsin</i>	72	\$174	2	\$6,250
<i>West Virginia</i>	55	\$309	1	\$17,000

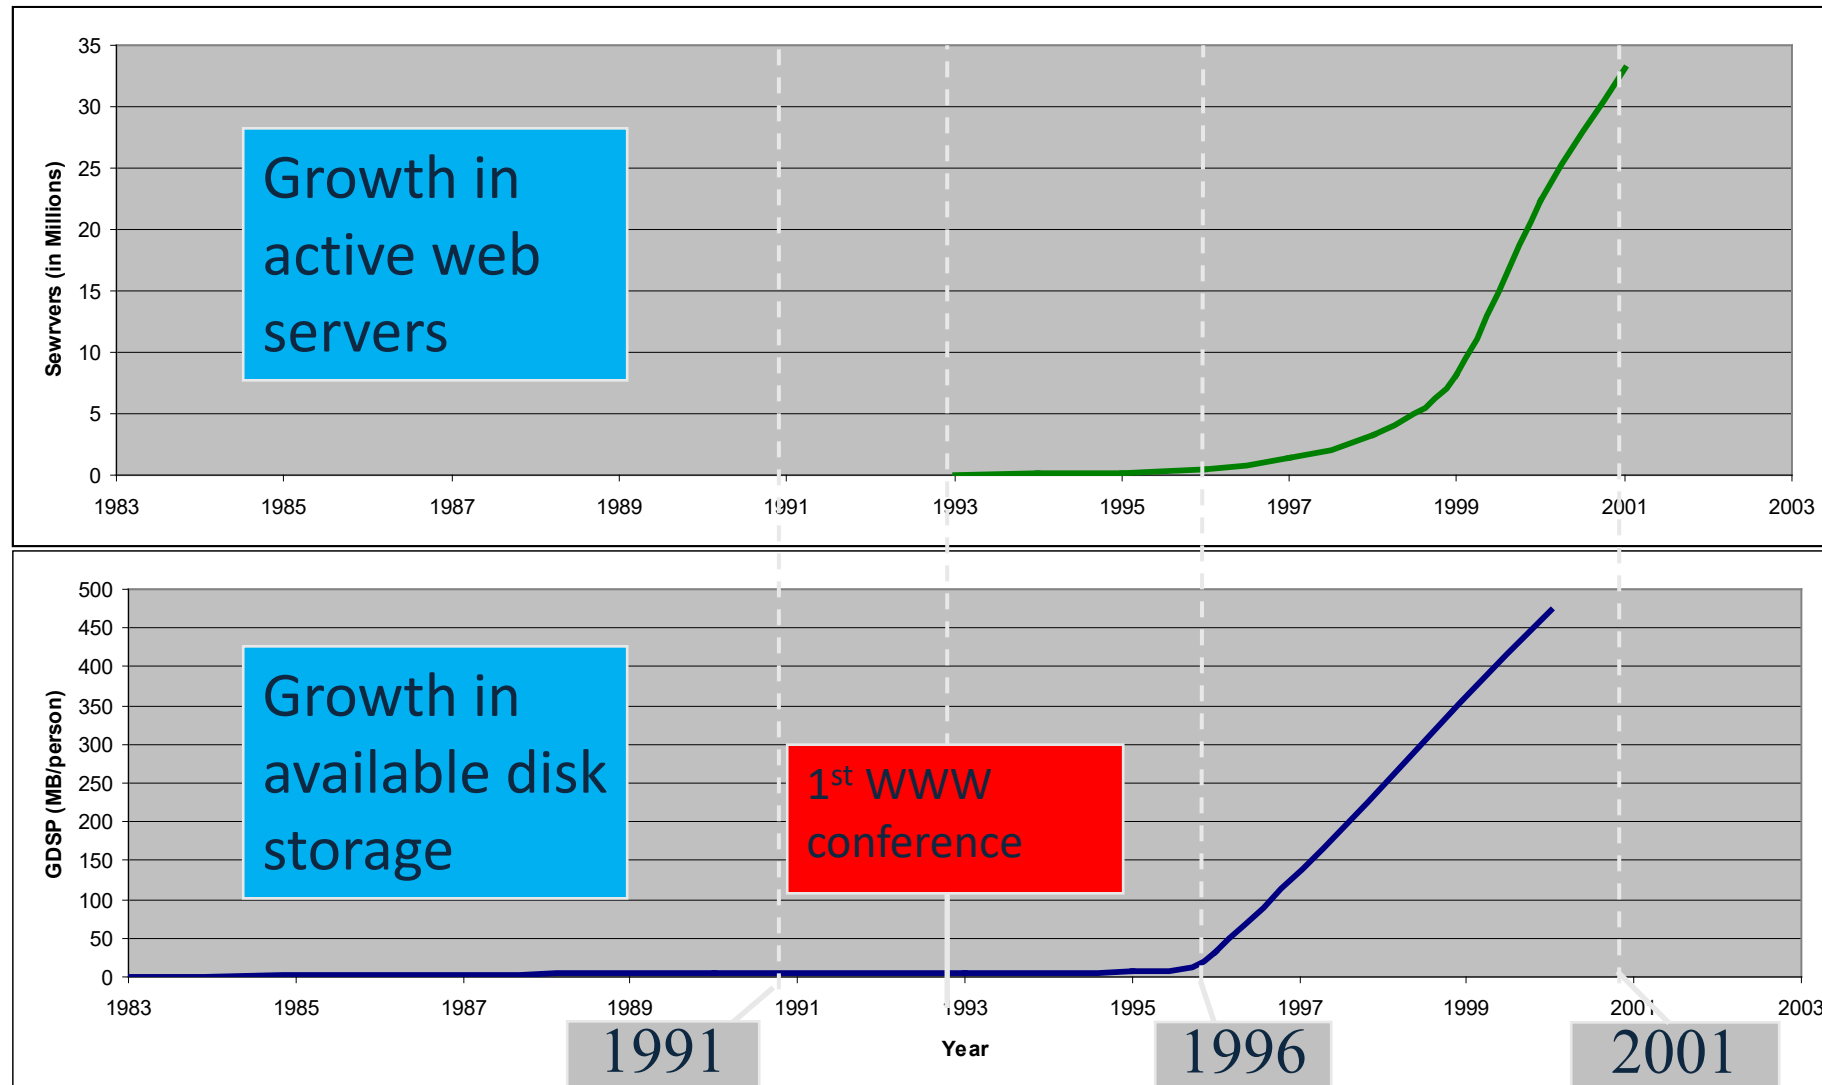

# A “Real” Study Reported in Late 2010!

- Challenge issued by U.S. Dept. Health & Human Services
- Provided ~15,000 Safe Harbor records to re-id team @ U. Chicago on self identified “minority” ethnicity
- Team purchased public records from commercial broker
- Could correctly identified 2 people
- Details at [http://www.ehcca.com/presentations/HIPAAWest4/lafky\\_2.pdf](http://www.ehcca.com/presentations/HIPAAWest4/lafky_2.pdf)

# Data Availability

- Information Generation
- Models of Availability
- Some Resources
- A Look at Voter Registration
- Curse of the SSN

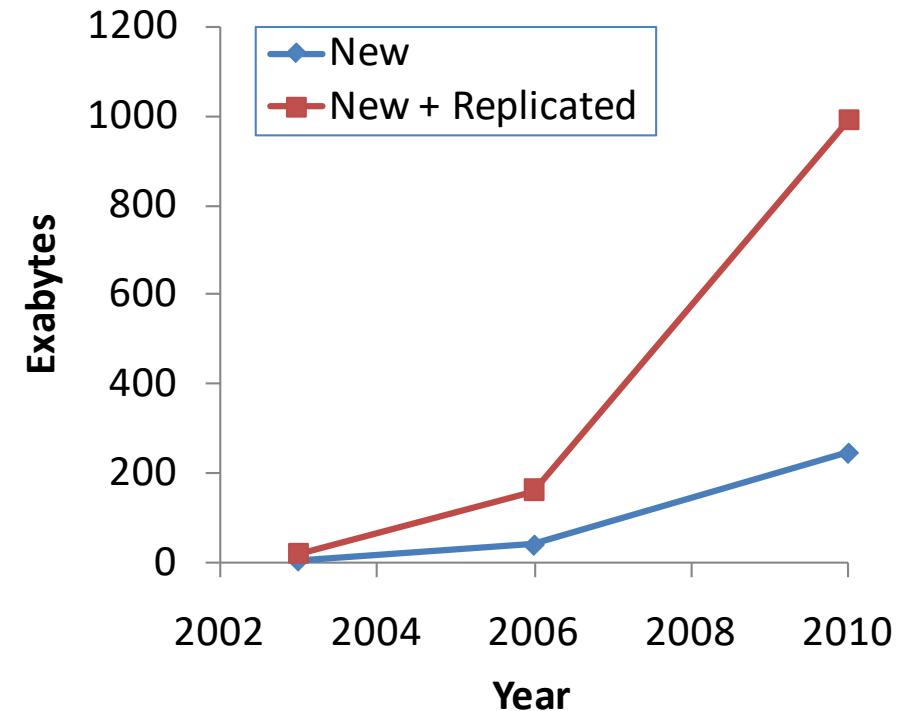

# Information Explosion

# Newer Data

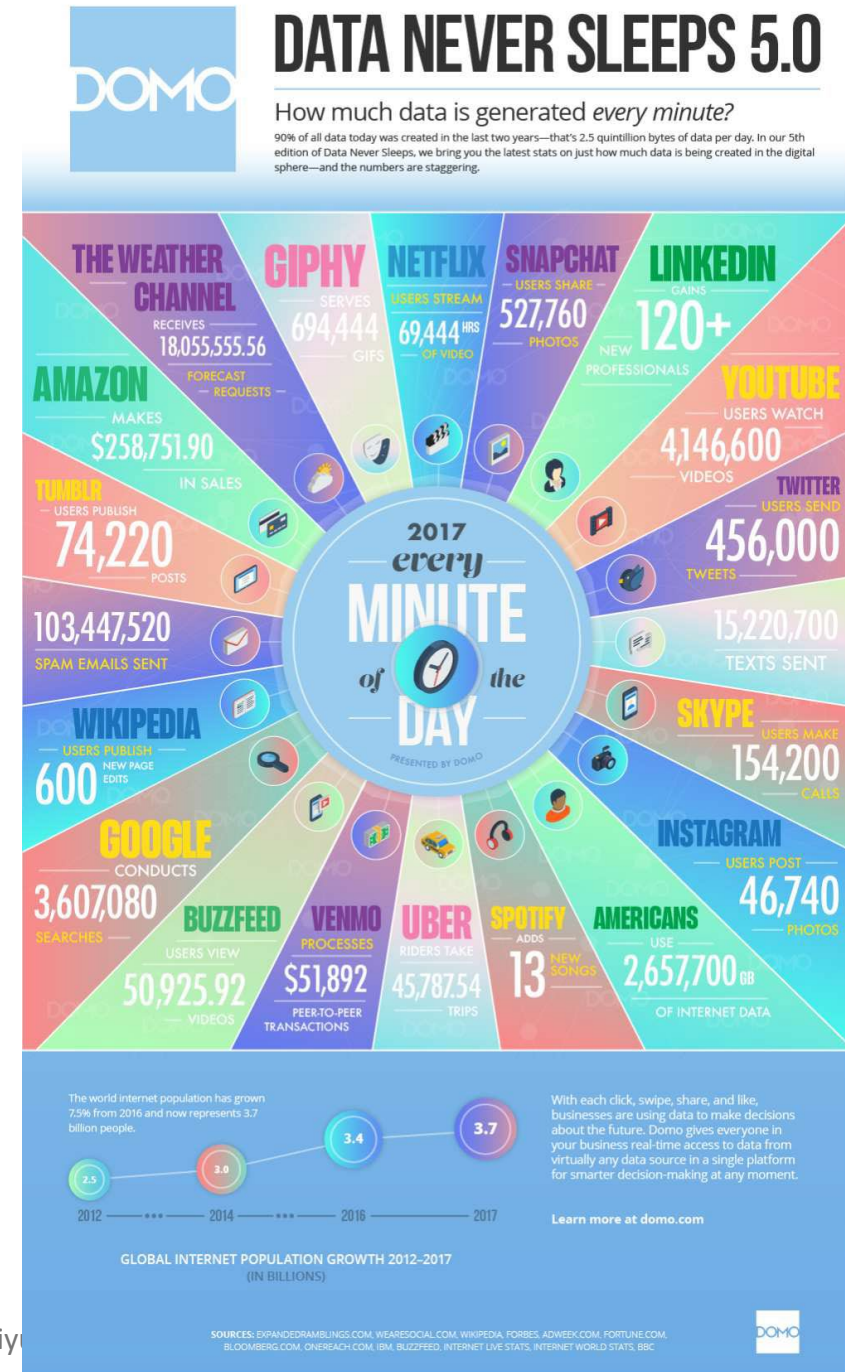

- Exabyte = 1 billion gigabytes
  - \* Includes analog data
    - radio communications, paper memos, etc.
  - \*\* Includes new and replicated data
    - Some estimates put original information closer to 40 exabytes

	New Data Generated in the "World"	Source
2003	5 exabytes*	UC Berkeley
2006	161 exabytes**	IDC

# More recent numbers

- On average, the US alone is generating 2,657,700 GB of *Internet data* every minute
- <https://www.domo.com/learn/data-never-sleeps-5>

# Accessibility

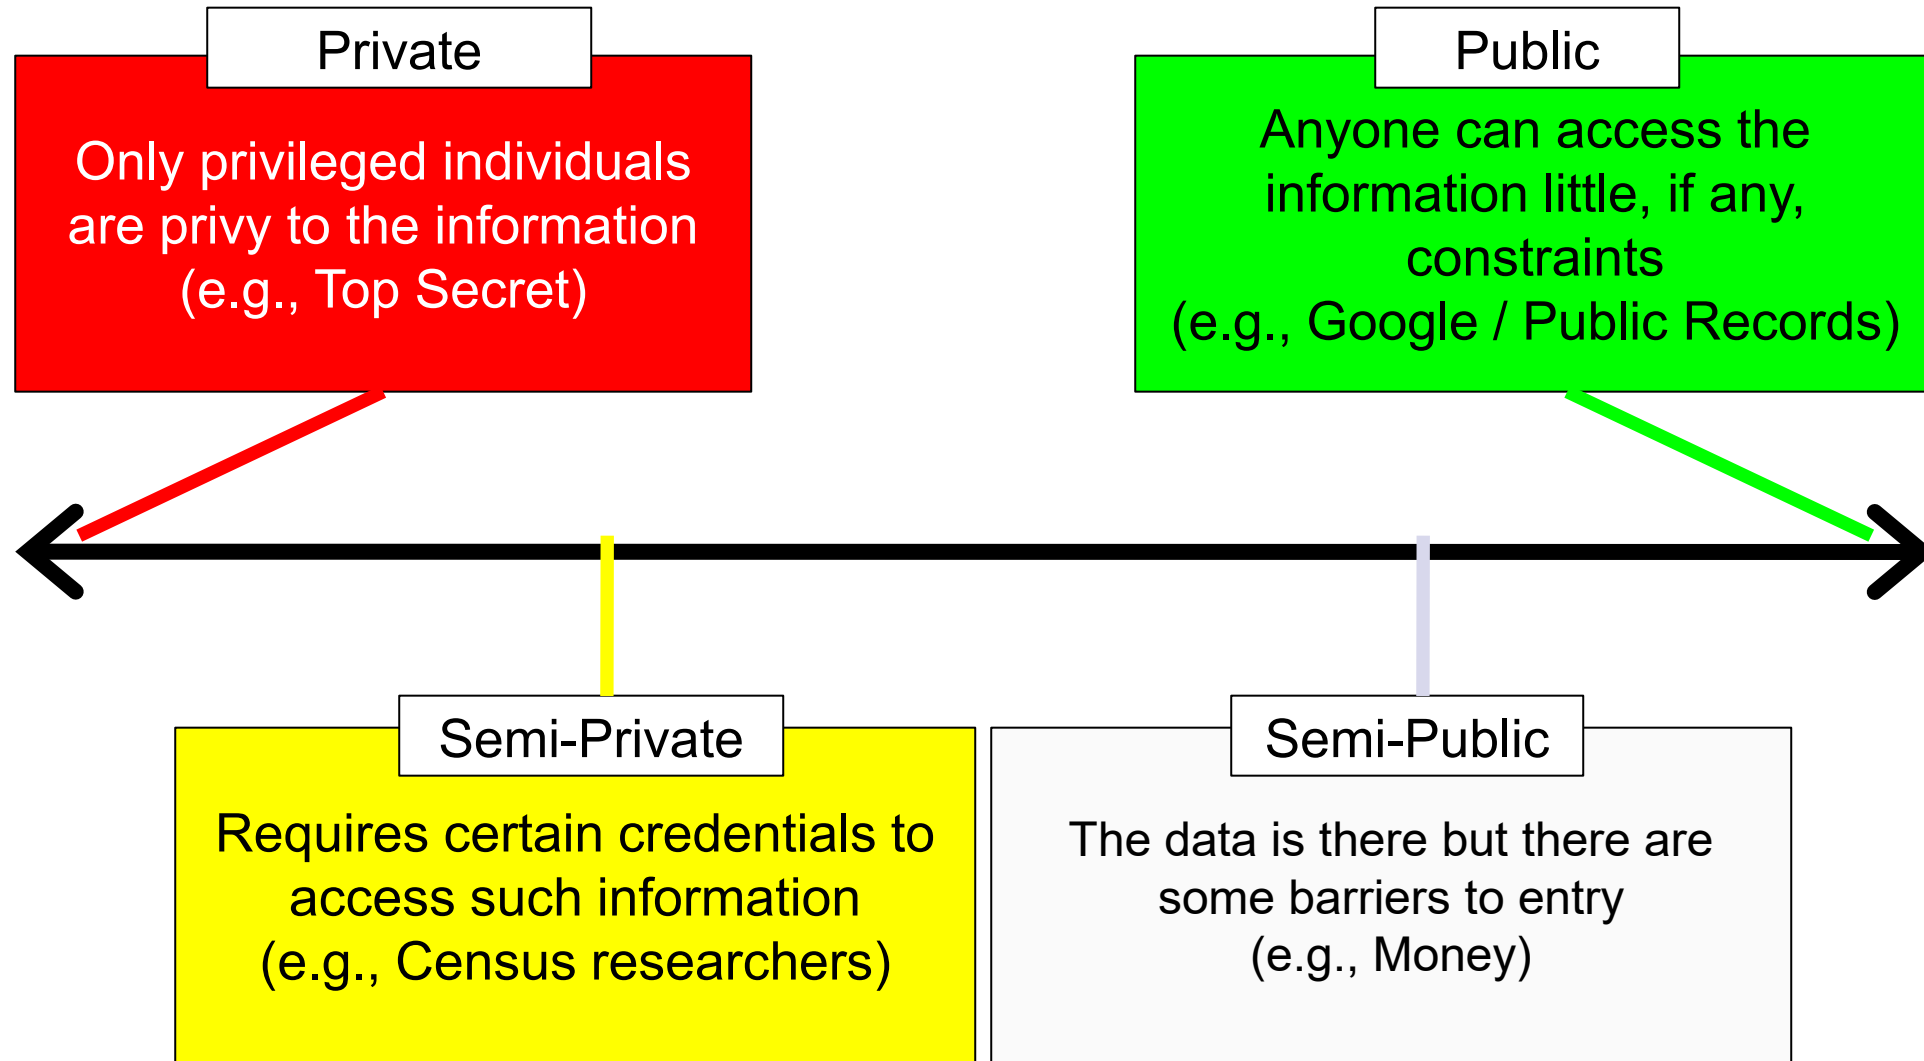

- Characterization of datasets / data
- Meta-information

- Cost: Price per record or cost per dataset?
- Attribute: Type of data (e.g., name, birthdate, profession)
- Availability = Credentials needed to access the dataset

# Availability

## FREE PUBLIC RECORDS

Welcome to Search Systems, your guide to Free Public Records. We've worked for 17 years to take the guesswork out of finding public record information online. We've located, analyzed, described, and organized links to over 55,000 databases by type and location to help you find property, criminal, court, birth, death, marriage, divorce records, licenses, deeds, mortgages, corporate records, business registration, and many other public record resources quickly, easily, and for free.

## Search Free Public Records

☒ In a State ☐ By Type of Record ☐ In a County ☐ By City ☐ By Zipcode ☐ Nationwide ☐ In Other Countries

Select a State ▼

View statewide, county, and city records, state licenses, or search by category (court records, property, corporations, etc.) for that state.

Free public record databases are priced right and give you current and accurate information right from the source. But you can only search one city, county, or state at a time. Our Premium databases help you save time and find more records as you can expand to statewide or nationwide searches for a small fee.

## Premium Databases

Criminal Records

Do a comprehensive background search of over 450 million court, inmate, corrections, offender, and fugitive records.

National Security Search

Search over 75 terrorist, designated national, denied person, money laundering, and broker discipline databases at once.

Bankruptcies-Judgments-Liens

Search over 100 million records nationwide by Individual Name, Business Name, or SSN/Tax ID.

Tenant Screening/Evictions

Manage your risks and save time looking for court eviction records. Use this database to find them for you.

# Brokers are Big Business

## IBM sells Watson Health assets to investment firm Francisco Partners

By Heather Landi • Jan 21, 2022 08:55am

Artificial Intelligence

Data Analytics

mergers and acquisitions

Oncology

IBM launched Watson Health in April 2015 to offer cloud-based access to the company's Watson supercomputer for analyzing healthcare data. According to reports, IBM made a series of acquisitions to build Watson Health to the tune of \$4 billion. (AndreyPopov/GettyImages)

IBM has reached a deal to sell the healthcare data and analytics assets from its Watson Health business to investment firm Francisco Partners, the companies announced Friday.

The companies did not disclose financial terms of the deal, but previous reports said IBM was seeking a price in the \$1 billion range. Axios reported, citing people familiar

## Here's what potential 23andMe buyers could do with your genetic data

By Lakshmi Varanasi and Lauren Edmonds

Getty Images; Alyssa Powell/BI

Apr 14, 2025, 1:26 AM GMT+8

Share Save

- 23andMe filed for bankruptcy amid financial struggles and fallout after a data breach.
- Now, potential buyers and investors are weighing the value of its DNA database.
- One of the world's largest troves of genetic information, its sale is raising new privacy concerns.

Late last month, genetic testing giant 23andMe filed for bankruptcy.

# Combining Databases?

- How do you integrate these databases?
  - Do you trust names?
  - Do you trust phone numbers?
  - How much information would you need until you're confident of a match?

**BirthDatabase.com**

**FREE Birthday Search**

Can't remember the birthday of a friend, relative or co-worker?  
Search our database of 120 million names and birth dates:

First Name  Last Name  Estimated Age

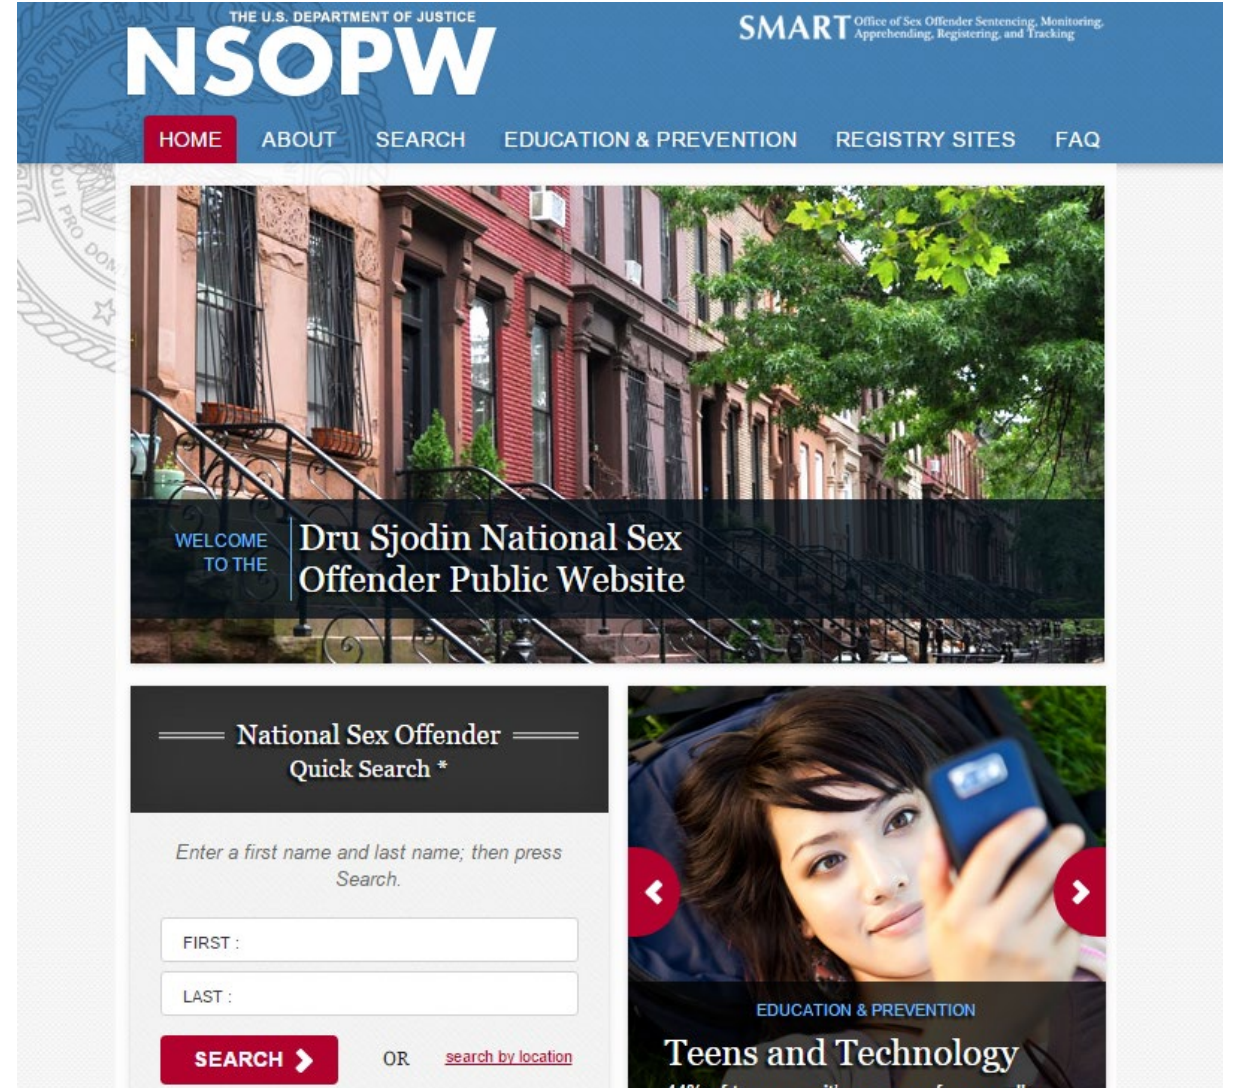

Note: Our information comes from official government records so it is best to search using the person's full first name, like Robert instead of Rob or Joseph instead of Joe. But, if you do not find their birthday after your first search, try again using their shorter first name. Also, the City/State/Zip shown in our results may not be current. It is what was listed on file at the time our data collected, and just used to help you identify the correct person.

# Registries

- National Sex Offender Registry
  - <https://www.nsopw.gov/>

# Remember the Voter Database?

- Public Information Sharing
- Example: Washington
  - If you are a voter, your **name, address, political jurisdiction, gender, date of birth, voting record, date of registration, and registration number** are public information under state law.  
(RCW 29A.08.710)
- This is public record by state law and does not violate security or privacy policy, however

# Behind Closed Doors

- More than public information for registration of voters
- Goal: **Enable sharing of information with other states securely and accurately** in fulfillment of HAVA (the Help America Vote Act)
- Example: Pennsylvania
  - “Statewide Uniform Registry of Electors”, county election officials have direct access to the centralized statewide database
  - The state uses “identifying number, name, and date of birth” for linking to motor vehicle and/or Social Security records
    - Use a hybrid match: **the number** and first two characters of the last name must match exactly, with discretion left to the county commission to determine if the rest of the record is a match
    - Currently uses the AAMVA (American Association of Motor Vehicles Administrators) criteria to **match information with SSN digits**: exact match of the last four digits of Social Security Number, first name, last name, month of birth, and year of birth.

# Policy & Usage Restrictions

RCW 29A.08.740

Violations of restricted use of registered voter data - Penalties - Liabilities. (Effective January 1, 2006.)

- (1) **Any person who uses registered voter data furnished under RCW 29A.08.720 for the purpose of mailing or delivering any advertisement or offer for any property, establishment, organization, product, or service or for the purpose of mailing or delivering any solicitation** for money, services, or anything of value is guilty of a **class C felony** punishable by imprisonment in a state correctional facility for a period of not more than five years or a fine of not more than ten thousand dollars or both such fine and imprisonment, and is liable to each person provided such advertisement or solicitation, without the person's consent, for the nuisance value of such person having to dispose of it, which value is herein established at five dollars for each item mailed or delivered to the person's residence. ...
- (2) Each person furnished data under RCW 29A.08.720 shall take reasonable precautions designed to assure that the **data is not used for the purpose of mailing or delivering any advertisement or offer for any property, establishment, organization, product, or service or for the purpose of mailing or delivering any solicitation for money, services, or anything of value.** However, the data may be used for any political purpose. Where failure to exercise due care in carrying out this responsibility results in the data being used for such purposes, then such person is jointly and severally liable for damages under subsection (1) of this section along with any other person liable under subsection (1) of this section for the misuse of such data.

[2005 c 246 § 19. Prior: 2003 c 111 § 249; 2003 c 53 § 176; 1999 c 298 § 2; 1992 c 7 § 32; 1974 ex.s. c 127 § 3; 1973 1st ex.s. c 111 § 4. Formerly RCW 29.04.120.]

# SSNs – Who Cares?

- The Social Security Number is one of, if not, ***the*** most overloaded numbers in the US
- It binds records on finances, insurance, education, death, taxes...
- Two HUGE problems: Fraud & Identity Theft

Year	Total # of Complaints	% of Complaints Reporting Amount Paid	Reported Amount Paid	Avg. Amount Paid	Median Amount Paid
2003	327,479	78%	\$459M	\$1.8k	\$222
2004	406,193	76%	\$567M	\$1.8k	\$267
2005	431,118	66%	\$682M	\$2.4k	\$350
2016	3,000,000	51%	\$744M	\$1.1k	\$450

- 63% Fraud: Internet Auction (12%), Foreign Money Offer (8%)
- 37% ID theft: Credit card (26%), Phone / Utilities (18%), Employment (12%), Government documents / benefits (9%), Loan (5%)

[https://www.ftc.gov/system/files/documents/reports/consumer-sentinel-network-data-book-january-december-2016/csn\\_cy-2016\\_data\\_book.pdf](https://www.ftc.gov/system/files/documents/reports/consumer-sentinel-network-data-book-january-december-2016/csn_cy-2016_data_book.pdf)

# Location and Age Matter (2005)

- Highest per capita rate of identity theft (metropolitan areas)

Rank	Metropolitan Area	Complaints Per 100,000 People
1	Phoenix-Mesa-Scottsdale, AZ	178.3
2	Las Vegas-Paradise, NV	158.5
3	Riverside-San Bernardino-Ontario, CA	145.7
43	Nashville-Davidson--Murfreesboro, TN	63.6

- Rate of victimization by age range

[https://www.ftc.gov/system/files/documents/reports/consumer-sentinel-network-data-book-january-december-2016/csn\\_cy-2016\\_data\\_book.pdf](https://www.ftc.gov/system/files/documents/reports/consumer-sentinel-network-data-book-january-december-2016/csn_cy-2016_data_book.pdf)

# Location and Age Matter (2016)

- Highest per capita rate of identity theft (metropolitan areas)

Rank	Metropolitan Area	Complaints Per	
		100,000 Population <sup>1</sup>	Complaints
1	Ann Arbor, MI Metropolitan Statistical Area	336.0	1,206
2	Miami-Fort Lauderdale-West Palm Beach, FL Metropolitan Statistical Area	223.8	13,457
3	Detroit-Warren-Dearborn, MI Metropolitan Statistical Area	214.7	9,238
4	St. Louis, MO-IL Metropolitan Statistical Area	206.0	5,792
5	Naples-Immokalee-Marco Island, FL Metropolitan Statistical Area	188.1	672
6	Tampa-St. Petersburg-Clearwater, FL Metropolitan Statistical Area	185.0	600

- Rate of victimization by age range

[https://www.ftc.gov/system/files/documents/reports/consumer-sentinel-network-data-book-january-december-2016/csn\\_cy-2016\\_data\\_book.pdf](https://www.ftc.gov/system/files/documents/reports/consumer-sentinel-network-data-book-january-december-2016/csn_cy-2016_data_book.pdf)

# SSNs

- Federal paternalism for “social insurance”
- Benefits based on payroll tax contributions →  
Federal Old-Age Benefits
- Issuance began in late 1936
- Issued by the Social Security Administration
  - Permanent residents
  - Temporary / working residents
- First number to John David Sweeney Jr. (Baltimore, MD)
- Lowest number issued: 001-01-0001

<http://www.ssa.gov/history>

# Medicare

- <http://my.medicare.gov/>
- Medicare Identification Number (MIN) is usually SSN + an added letter
- Ex: 000-00-0000A
  - A = wage earner (primary)
  - If spouse becomes eligible for Medicare benefits through primary, they are assigned a B
  - Many valid suffixes
- MIN may be different than the SSN

# Ferree Snafu

- 1938: Wallet manufacturer, E.H. Ferree, promoted new wallet
- Sample card was a real card
  - Hilda Schrader Whitcher, secretary of the company vice president
- Wallet sold by Woolworth department stores across the USA
- 1943: 5,755 people using the number
- SSA voided the number; issued Hilda new card
- > 40,000 people reported the Whitcher number as their own
- 1976: 40 people found using the number
- 1977: 12 “ “ “ “ “
- It's known as “the Social Security Number issued by Woolworth”

# SSN Assignment

- SSNs are almost a one-time shot
- You can get a new SSN only in extremely rare circumstances
- You must prove
  - Someone has stolen your number
  - Someone is using it illegally
  - The misuse is causing you serious harm

<http://www.socialsecurity.gov/ssnumber/ss5doc.htm>

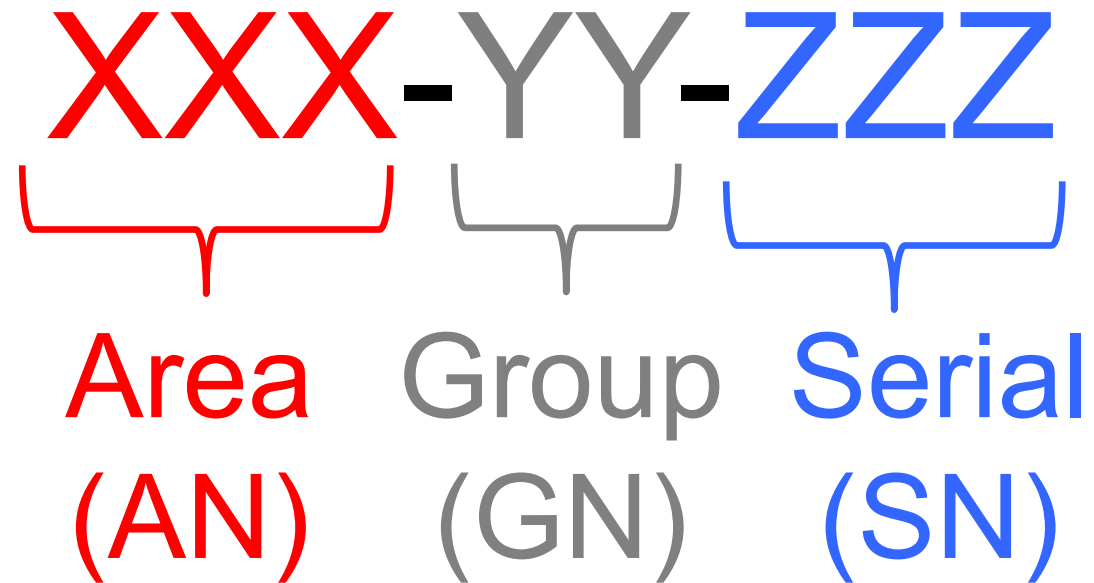

# Modern Times: Restricted Use

- Some state laws restrict SSN use, display, and transfer (e.g., CA in 2001)
- Michigan prohibits use of more than 4 consecutive digits of an SSN
  - Is that sufficient protection?

# The SSN

**XXX-YY-ZZZ**

**Area**      **Group**      **Serial**  
**(AN)**      **(GN)**      **(SN)**

The diagram illustrates the Social Security Number (SSN) format. It shows the pattern 'XXX-YY-ZZZ' where 'XXX' is red, 'YY' is gray, and 'ZZZ' is blue. Below each group of digits is a bracket of the same color. Under the red bracket is the label 'Area (AN)' in red. Under the gray bracket is the label 'Group (GN)' in gray. Under the blue bracket is the label 'Serial (SN)' in blue.

# Area Numbers: XXX

- Prior to 1972: represented the state from which a person applied for their social security card
- After 1972: based on zip code in the mailing address provided on the application form

# Area Numbers: XXX

7/1/63
- 000 will NEVER be a  
valid XXX number

# Group Numbers: YY

- Range from 01-99
- They're not allocated consecutively!
- Highest group issued as of 1/2/08
  - <http://www.ssa.gov/employer/highgroup.txt>

Order	Type	Range
1 <sup>st</sup>	Odd	01 through 09
2 <sup>nd</sup>	Even	10 through 98
3 <sup>rd</sup>	Even	02 through 08
4 <sup>th</sup>	Odd	11 through 99

- Can also trace the allocation of group numbers over time:
  - <http://www.ssa.gov/employer/ssnvhighgroup.htm>

# Serial Numbers: ZZZZ

- Last 4 digits
- SNs have been issued “in monotonically increasing order” within each State and within each GN
  - From 0001 to 9999
- However, SSA also writes:

*“SSNs are assigned **randomly** by computer within the confines of the area numbers allocated to a particular state based on data keyed to the Modernized Enumeration System” (50, RM00201.060)*

- ...reflecting SSA’s belief that idiosyncrasies in the SSN application and vetting processes make the SN assignment effectively random

# Online Validation

- <http://www.ssnvalidator.com>

# Chances of correctly matching SSN digits by random guess, under *status quo* knowledge

	Alaska, 1998		New York, 1998	
	First 5 digits with 1 guess	All 9 digits with < 1,000 guesses	First 5 digits with 1 guess	All 9 digits with < 1,000 guesses
No auxiliary knowledge	0.0014%	0.00014%	0.0014%	0.00014%
Knowledge of state of SSN application	1%	0.1%	0.012%	0.0012%

# Or SSDI

- You could wait until someone dies...
- Social Security Death Index (SSDI) Database
  - <http://search.ancestry.com/search/db.aspx?dbid=3693>
- Death reported to the Social Security Administration
  - Possibly submitted by “relation” requesting Social Security benefits  
<http://www.ssa.gov/pubs/10084.html>
  - or to stop benefits

# Rise of the SSN

- Over 80 million records
- Data back to 1937, but the majority is after 1962

# Reasons to believe that the assignment lacks sufficient randomness

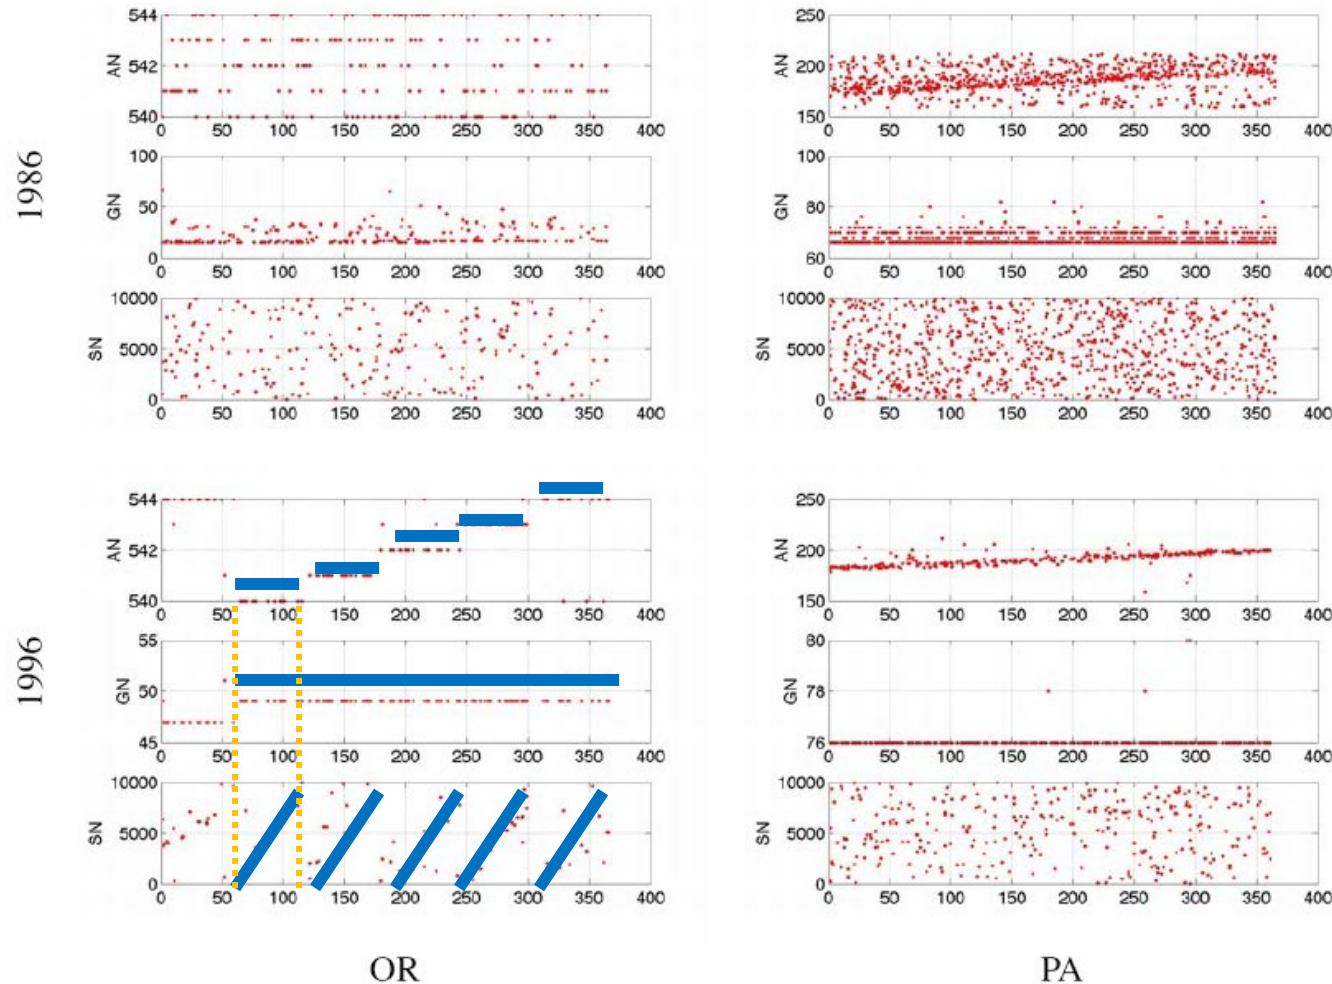

- In the last 30 years, SSN issuance has become more regular
  - Increasing computerization of the public administration, including SSA and its various fields offices
  - After 1972, SSN assignment centralized from Baltimore, MD
  - After 1989, Enumeration at Birth Process (EAB)
    - Prior to 1989, only small percentage of people received SSN when they were born
    - Currently at least 90 percent of all newborns receive SSN via EAB together with birth certificate

Adapted from A. Acquisti

# Hence, two hypotheses

1. Expect SSN issuance patterns to have become more regular over the years, i.e., increasingly correlated with an individual's birthday and birthplace
  - This should be detected through analysis of available SSN data
2. Expect these patterns to have become so regular that it is possible to infer *unknown SSNs* based on the patterns detected on *available SSNs*
  - This should be verified by contrasting estimated SSNs against known SSNs

# SSN assignment patterns: Two representative States

# Prediction Approach

- Area number
  - Mode AN in target's state around target's birthday
- Group number
  - Mode GN in target's state around target's birthday
- Serial number
  - Based on regressions coefficients, inserting target's birthday as *dd*

# Success metrics

- Accuracy in prediction of the first 5 digits of an individual's SSN with 1, 10, 100, and 1000 attempts
  - Note: 1,000 attempts is equivalent to 3-digit PIN
  - And is very insecure and vulnerable to brute force attacks

# AN-GN predictability (first 5 digits)

# Full SSN predictability with $<1,000$ attempts

# Test 2: From social networks data to SSNs

- Used birthday data of 621 alive individuals to predict their SSN, based on interpolation with DMF data
- Sample: born in 1986-1990 (i.e., mostly before EAB)
- In most populous states (i.e., worst case scenario)
- Birthday and birthplace data can be obtained from several sources, but most easily, and in mass amounts, from online social networks

# Facebook estimations

- Overall AN prediction accuracy: 8.5%
- Overall GN prediction accuracy: 29.1%
- Combined AN-GN prediction accuracy: 6.3%
  - Compare to corresponding weighted sample in Test 1 (based on DMF data): 11.21%

DOB 05/26/86

Dear Dr. Lang:

I feel much better after seeing Virginia this time. Dot is a 7 and 6/12 year old female in follow up for insulin dependent diabetes mellitus diagnosed in June of 1993 by Dr. Frank at Brigham's. She is currently on Lily Human Insulin and is growing and gaining weight normally. She will start competing again with the U. S. Junior Gymnastics team. We will contact Mrs. Hodgkins at Marina Corp 473-1214 for a follow-up visit for her daughter.

Patrick Hayes, M.D. 34764
